

SMART PROCESSING UNITS

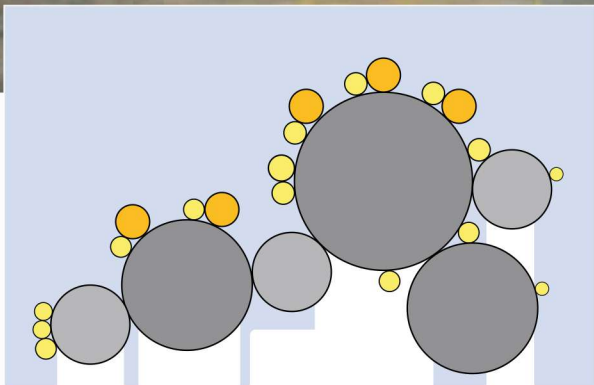

Customer driven solutions for:

- Wool top units
- Defelting, blending and recombining units
- Worsted spinning preparation units
- Tow to top units
- Semi-worsted units
- Hard fibres units

Flax cards

A innovation ahead

These cards, designed by N. Schlumberger, are specially adapted to the process of flax tow and bast fibres.

They are equipped with:

- A bale opener, especially adapted to bast fibres and linked to the volumetric hopper feeder
- A double doffer delivery, fitted with a drafting head
- A high capacity automatic coiler
- A centralized piloting from a control panel
- A integrated suction network with several dust extractor nozzles to preserve environmental air quality objectives in the mill and assure a high quality of the delivery slivers.

The flax cards are a major innovation in flax and hard fibres industries.
